

O-Ring Fitting

Hose Fitting Specifications

Style 33

Description

O-ring fittings are designed for rapid and repeat connect/disconnect applications. Features include zero clearance needed for make-up. The fitting style requires only minimal torque to seat and performs superbly in medium and high pressure services. O-ring fittings prevent torquing of hose during hook-up. A number of manufacturers offer O-ring style connections, please compare thread sizes with this fitting before attempting interchange. Temperature ratings of O-rings assemblies are dependent on O-ring gasket material temperature ratings (gaskets are not provided with fitting).

Material

Type 316L Stainless Steel Standard.

Size Range

1/4 inch to 1 inch.

O-Ring Specifications Style 33
